

Prestige

Quick-change milking parlour

VAN
DINTHER

The Prestige milking parlour is an economically attractive quick-change milking parlour with a high milking capacity which takes up a limited amount of space. The milking parlour is available both with electric and pneumatic controls, and in any desired number of positions. This milking parlour can be used in both new and renovated buildings. The quick changeover yields a high milking capacity. The steel construction is simple, but robust.

The cows enter the milking parlour one after the other. As soon as the first cow has placed itself in the first position, there will be an opening for the second cow to place itself.

The cows stand close to each other, which ensures time-saving, short walking routes. In addition, it poses no problem to milk in only a partially filled milking parlour.

The gates in this system are low-maintenance and constructed in such a way that the cow can stand in the position in a smooth and relaxed way. After milking, the gate which is mounted on the wall on hinges moves upwards, so that the cows can quickly exit the milking parlour.

For personal hygiene, you can choose between a manure plate or manure gutter behind the cows.

TECHNICAL INFORMATION

- Standard position width 700 mm centre to centre
- By default, stainless steel manure plate and kick protection
- Pneumatic installation with electrical controls
- The walk-through distance between selection gates and central frame is adjustable
- Hot dip galvanised construction, inside and out
- Supplied with assembly and instruction manual and CE conformity declaration
